

# Respiratory

## Therapeutics Group

Respiratory Therapeutics Group offers a variety of the following respiratory product categories:

Respiratory Therapeutics Group continues to increase our product development and production in all of our product categories.

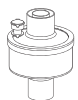

## Respiratory Therapeutics Group has a clear business objective...

To develop, produce, promote and distribute respiratory therapy products and technologies. The product portfolio has been developed over several years with a core focus on addressing key customer problems and associated opportunities.

With years of healthcare products experience, we are uniquely positioned to help our clients obtain quality healthcare products and achieve the cost savings that our healthcare system demands. We pride ourselves on delivering excellence to our clients.

Respiratory Therapeutics Group focuses on alternate care, long-term care, sub-acute care, hospital systems and large distributors.. We help you find the solutions and goals that meet your respiratory needs.

#### RespVac Yankauer Suction Handle

Flange Tip Vented  
Sterile

The RespVac Yankauer Suction Bulb Tip is a sterile, single-use suction tool used to safely clear secretions, thereby maintaining a patient's airway and improving ventilation and oxygenation. The RespVac Yankauer has a rigid and has a curved one-piece design made with shatterproof plastic. The clear tips permit visual monitoring of suction fluids. A ribbed, universal connector fits securely on all types of suction connecting tubing and can work with all types of suction machine devices. The RespVac Yankauer is available in servile different types, with or without a vent control, bulb tip and flange tip.

The RespVac Suction Catheter is designed to deliver maximum suctioning efficiency with minimal patient trauma. The catheter's material is soft and flexible to minimize trauma to delicate mucosal tissue, yet firm enough to allow catheter rotation throughout the treatment. This helps provide the respiratory therapist with the confidence necessary to perform a procedure quickly and effectively.

The RespVac Suction Tubing is available in both sterile or non-sterile and is designed with a clear material for visualization during suctioning. The RespVac suction tubing is available in various sizes.

# O2-Life

The O2-Life Oxygen Masks & Nasal Cannulas are designed for the efficient delivery of oxygen therapy while providing the maximum in patient comfort.
